

Future Fossils Carpet

KILIAN VOS

Crafted entirely through generative CGI, this collection transforms algorithms into artifacts - fragments of imagined geology, synthetic stones shaped not by centuries, but by creative code. These are not relics of what has been, but of what might come. Each piece is a paradox: artificial yet organic, familiar yet otherworldly - imagined artifacts formed by machines, yet steeped in a strangely natural language. Layers of texture evoke mineral veins, crystalline fractures, and organic flow. For Moooi, a brand that thrives between the real and the fantastical, Future Fossils embraces a new kind of storytelling - an exploration of a future not yet explored.

Detailing

Fragments of imagined geology, shaped not by centuries but by code. Future Fossils is a carpet collection where generative CGI meets natural texture –
